2. INTRODUCTION

2.1 Purpose

The Regional District is seeking proposals from professionals to supply, deliver and install two (2) diesel generators, one located at the Sechelt Landfill and the other at Pender Harbour Transfer Station.

In particular, the Contractor shall perform the following for both sites:

- a) Supply and deliver generator to each site location;
- b) Construct a concrete pad for new generator;
- c) Install generator cage/enclosure to protect from unauthorized access and theft;
- d) Install generator as per manufacturer specifications;
- e) Perform testing as set out in this Request for Proposal;
- f) Provide demonstration and training to Regional District staff as set out in this Request for Proposal; and
- g) Submit operating and maintenance manuals, maintenance materials and drawings.

Additionally:

- a) Supply and install an automatic transfer switch (Sechelt Landfill).
- b) Supply and install a manual transfer switch (Pender Harbour Transfer Station).

3. SITUATION/OVERVIEW

3.1 Background

The Regional District requires replacement of existing generators at the Sechelt Landfill and Pender Harbour Transfer Station.

Pender Harbour Transfer Station – 5545 Garden Bay Road, Pender Harbour, BC

At the *Pender Harbour Transfer Station*; the manual-start portable gasoline generator provides back-up power for the scale building, office equipment, and site lighting should a BC Hydro power outage occur while the site is open. The backup generator needs to be started promptly once the power goes out to safely operate the site until utility power resumes. The generator is shut off overnight if utility power remains unavailable. The office equipment and scale is equipped with a dedicated Uninterruptible Power Supply (UPS) to allow orderly generator startup. The anticipated run time during a BC Hydro outage can be up to 8.5 per day, and has averaged 130 hours per year in total. The removal of the existing generator is not part of the scope of work for this project.

Sechelt Landfill – 4905 Dusty Road, Sechelt, BC

At *Sechelt Landfill*; there are currently two redundant manual start diesel generators at the site and a manual A/B load transfer switch. They are used to provide continuous power for the entire site including scale, computer, telephone, electric space heaters, drainage sump pumps, electric fence and exterior lighting. Some of the critical office equipment is equipped with a dedicated Uninterruptible Power Supply (UPS). As there is currently no utility power available at the site the generator is considered a critical system; there is a risk of damage to infrastructure if the drainage sump pumps are not guaranteed operational in rainy weather.

Currently a 'main' 20 KW diesel generator runs during our daily operations when the site is attended and power demands are higher. Overnight, we use a smaller 14 KW diesel generator to reduce fuel. The overnight generator is also equipped with a SCADA monitoring device to alert and call out staff if the engine stops for any reason. The removal of the existing generators and transfer switch is not part of the scope of work for this project.

The Regional District also completed the *Sechelt Landfill Power System Assessment* in June 2021 and will move to a new direct connection into the BC Hydro grid in the near future, subject to availability. At that time the replacement generator being solicited here will be used exclusively to provide backup power if a hydro power outage occurs – outages may occur at any time and the replacement generator is required to be delivered equipped for auto-start/auto-transfer service. *Before* BC Hydro service becomes available to the site this generator will be used primarily for daytime operation and will run for 8 hours per day (with the overnight generator available as a backup, and vice-versa). *After* BC Hydro service becomes available this generator will be demoted to backup automatic-start service and runtime may be up to 24 hours per day, but is anticipated to be less than 350 hours per year.

The current site hours of operation for each location are included in Appendix 1. Execution of this project should not significantly disrupt operations. Proponents are required to visit the site to help with their understanding of site layout, access, and any other factors that may influence their proposal.

3.2 Project Objectives

The objective of this project is to secure a Contractor to supply, deliver and install two generators at the Sechelt Landfill and Pender Harbour Transfer Station respectively.

3.3 Scope

3.3.1 Construct a concrete pad for each generator system

The Contractor will construct a concrete pad for mounting the new generator. It will be constructed in a suitable location as determined by the Contractor and Regional District. The Contractor will be responsible for roughing-in all associated wiring and conduit required for the installation of each new generator with sound reducing enclosure, as determined by the Contractor and the Regional District following review on site.

3.3.2 Supply and install generator cage for each generator system

The Contractor will supply and install a compatible generator cage to protect from unauthorized access, vandalism and theft as determined by the Contractor and the Regional District following site review.

3.3.3 Installation of Automatic Transfer Switch (Sechelt)

Based on the generator specifications, the Contractor will supply and install a compatible automatic transfer switch. The transfer switch will be installed in a suitable location, as determined by the Contractor and the Regional District.

3.3.4 Installation of Manual Transfer Switch (Pender Harbour)

Based on the generator specifications, the Contractor will supply and install a compatible manual transfer switch. The transfer switch will be installed in a suitable location, as determined by the Contractor and the Regional District.

3.3.5 Delivery and Installation of new generator system

The Contractor will work with the generator supplier to schedule the delivery of the generator. Once the generator is delivered, the Contractor will be responsible for securing the generator to the pad as per the supplier's specifications and completing all the wiring and terminations required for the installation of the generator. The generator system specifications can be found in Schedule A Supplementary Generator Specifications.

The Contractor will be responsible for obtaining all permits required to complete any electrical work.

3.3.6 Commissioning and Testing

The Contractor will coordinate with the Regional District and the generator supplier to complete all required testing and commissioning as set out in Schedule A Supplementary Generator Specifications to finalize the installation.

The Contractor will be responsible for demonstrating and training Regional District staff as set out in Schedule A Supplementary Generator Specifications.

3.3.7 Documentation and Submittals

The Contractor will provide copies of all documentation set out in Schedule A Supplementary Generator Specifications for each generator system including shop drawings, as-built drawings, permits, any other relevant documents that were part of the project. The Contractor will also provide operations and maintenance manuals for the supplied equipment.
