2. INTRODUCTION

2.1 Purpose

The purpose of this RFP (Request for Proposal) is to select a service provider(s) to provide drywall testing for drywall that has been delivered to the Sechelt Landfill and the Pender Harbour Transfer Station (sites). In addition to drywall testing, the service provider will conduct asbestos abatement for any drywall loads that produce positive test results for asbestos.

3. SITUATION/OVERVIEW

3.1 Overview

The Regional District accepts drywall for recycling at its Pender Harbour Transfer Station and Sechelt Landfill sites. The drywall screening process begins the moment the scale attendant is aware that drywall is contained within the load. The drywall is placed by the public into 40 yard bins and, once full, are hauled by a contracted service provider to New West Gypsum for recycling.

The Regional District has had repeated occurrences of drywall testing positive for asbestos despite our rigorous screening processes. Once a test result for drywall comes back as containing asbestos the entire load is treated as contaminated and requires abatement.

3.1.1 History

At the Pender Harbour Transfer Station and the Sechelt Landfill sites, vehicles containing drywall are scaled in by the Regional District. As soon as the scale attendant is made aware that drywall is contained in the load, stringent drywall acceptance procedures are activated. Acceptance of drywall for recycling at the Sites is contingent upon receipt of a lab analysis that indicates no detectable presence of asbestos and the completion of a declaration form. Drywall that has never been used is accepted with the completion of a declaration form. The scale attendant is the first to review the lab analysis and/or declaration form to ensure all standards are met and the lab analysis results indicate there is no detectable asbestos. The customer is given the package of paperwork and directed to the drop-off area to meet a site attendant for a second review of the paperwork. If the paperwork meets all requirements, the site attendant will direct the customer to the 40 yard bin to unload the drywall. While the drywall is being unloaded, the site attendant monitors all drywall going into the bin to ensure it matches any descriptions on the paperwork. Stringent acceptance procedures are followed by Regional District site staff to ensure any drywall disposed does not contain asbestos to protect the safety of staff, the public and the hauler and to ensure drywall will be accepted by the gypsum recycling contractor, New West Gypsum. New West Gypsum is the only drywall recycling facility in BC. Almost all of the drywall accepted by that facility will be recycled.

Despite rigorous procedures followed by staff, there were still loads being detected which contain asbestos.

The Regional District sought Board direction and it was decided to continue accepting drywall at the Sechelt Landfill and Pender Harbour Transfer Station and to increase tipping fees to \$1,000 per tonne as of August 1, 2021. The new tipping fees provide funding for additional testing of drywall prior to leaving the Sites and abatement in the event a test result comes back positive for asbestos.

The Regional District has been conducting testing on an interim basis since August 1, 2021 and

is seeking a longer-term contract for these services.

3.1.2 Tonnage

Drywall Tonnes per year	2020	2019	2018	2017
Sechelt Landfill	330	446	391	396
Pender Harbour Transfer Station	67	49	68	26

On average, one 40 yard container load of drywall weighs 8.3 tonnes.

3.1.3 Three Month Trial Phase with New Tipping Fee

From August 1, 2021 to October 31, 2021, a trial phase of drywall testing was conducted in order to help refine the scope of work this RFP.

During the trial phase, on average, 4 - 6 samples of testing per 2.5 tonne intervals were completed. Samples were chosen from drywall with paint or mud that did not have a date stamp and appeared to be older. Testing was also conducted on materials within the load that asbestos is commonly found in. For the month of August 2021, one test resulted in 2 tonnes of drywall requiring abatement.

An average of 55% less drywall was delivered to the Sites during the trial phase when compared to the previous year. However, it is anticipated that tonnages will be at approximately 70% of the four year average.

3.1.4 Drywall Tonnage Projections based on 3 month trial

	Average drywall tonnage per year 2017-2020	Estimated drywall tonnage per year 2022
Sechelt Landfill	330	235
Pender Harbour Transfer Station	67	47

3.2 Project Objectives

The objective of this project is to secure a Contractor to collect samples of drywall on site within 24 business hours after the Regional District requests testing, to provide test results within 48 hours of collecting samples and in the event that any test results indicate asbestos containing materials in the load, to provide abatement of drywall as soon as possible.
