2. INTRODUCTION

2.1 Purpose

The Sunshine Coast Regional District ("Regional District") is seeking the design-build of a new float and gangway, including the installation and disposal of the existing float at the Keats Landing port location.

3. SITUATION/OVERVIEW

3.1 Background

In 2001, the Regional District took over care and control of nine (9) docks from Transport Canada; one (1) dock is subject to this tender. This Request for Proposals is related to the requirement for a new float and gangway on the Keats Landing dock, located on Keats Island, on the north-west side of Keats Island facing Gibsons, BC. (Lat: 49.39469°N, Lon: 123.48382°W).

The float is located on the east side of the dock approach and wharfhead. The length runs north to south. The Keats Landing float is comprised of timber construction with fiberglass encased plywood box pontoons. The overall dimensions of the current float are 15.2m x 4.3m. Two of the plywood pontoons have been removed and replaced with plastic barrels inserted in place as a temporary measure to maintain a safe freeboard. The location of the barrels are along the West side of the float (x9). There are three pile wells constructed on the float. One pile well is mid-span at the end of the float, (south), containing 4 unrestrained piles. The two other pile wells are approximately 5m from the north end on either side of the float containing three unrestrained piles each. All piles within the wells are made from Creosote timber. The gangway is made of steel with wood step risers and has overall dimensions of 10.9m x 1.2m. The entrance to the gangway is located at the South/West corner of the wharfhead and ramps in a north to south direction.

The location of the ports can be found on our website at <http://www.scrd.ca/locations-regulations>

3.2 Project Objectives

3.3 Scope

The scope of this proposal is for the Contractor to design-build a new float and gangway, including the installation and disposal of the existing float at the Keats Landing port location. Listed below are the requirements of this proposal at a minimum.

1. Review the facility drawings and provided information from the Regional District pertaining to the existing float.
2. Secure all permits and approvals, including but not limited to: Fisheries and Oceans Canada (DFO), Ministry of Environment (MOE), etc.
3. Submittal: Prepare and submit Engineer signed design documents and specifications for the replacement float and gangway.
 - a. Design considerations and limitations:
 - i. The float and gangway are to be fabricated from components designed to be functional for a 20-25 year lifespan in an ocean environment.
 - ii. Float design is to have consideration of safety, operation, and ease of maintenance and repair requirements, while optimizing life cycle costs.
 - iii. The design of the float must accommodate the three existing pile well locations and retain similar overall dimensions of the existing.
 - iv. A freeboard of 430mm is typical of floats of this nature above the water line as measured from the surface of the deck to the water line. (accepted tolerance of (+/- 50mm) The Contractor is responsible for ensuring that the design of the float will provide this amount of freeboard and that the freeboard be adjustable. The float must be designed to allow adjustments to buoyancy at each corner of the float as may be required, based on the float characteristics and weight of other dock components such as the ramp. These buoyancy adjustments should be capable from the deck.
 - v. Float design that allows Regional District staff to replace decking, rub rails and zinc anodes with the least possible effort. The design of the float should ensure that no wood materials are required to be under water. All routine maintenance work including replacement of decking and rub rails should be possible from the deck of the float. Any required zinc anodes should be positioned to also allow replacement from the deck of the float without the need for staff to enter the water to perform this task. Preventive measures for galvanic corrosion on the float itself should be included as required.
 - vi. Steel materials should be a minimum of 3/8 inch thickness.
 - vii. All welding is to be completed by a B.C. certified welder.
 - viii. All timber shall be pressure treated National Lumber Grades Authority (NLGA) No. 1 coast Douglas Fir or better. Lumber to be graded to NLGA standard grading rules for Canadian lumber, 2003.
 - ix. Load rating of floats typical to Transport Canada have been historically rated to a maximum uniform load of 122 kg/m² or 1.2kPa. The Gangway as specified by Transport Canada is 1.2kPa.
 - x. The Regional District is not limiting design solutions. Proponents are encouraged to explore alternative design and replacement options that

remain within best practices, regulations, standards, and meets Regional District all the public, private, and commercial uses of the float.

4. Ensure the float design and construction methods conforms to all applicable codes, guidelines, regulations, and all laws as required by the authorities having jurisdiction.
5. The drawings and relevant documents shall be signed and sealed by a Professional Engineer in good standing with the Engineers and Geoscientists British Columbia (EGBC).
6. Submittal: Installation and fabrication plan of the new float. The fabrication site for the float will be determined by the Contractor.
7. Submittal: Disposal plan of the existing float. Including all possible materials that can be removed, retained, and reused from the existing float.
8. Submittal: Environmental management plan.
9. Submittal: Class A project cost estimate.
10. Submittal: Preparation and certification of record drawings in electronic format pdf. and AutoCAD or Civil 3D 2020.

5. REQUIREMENTS

In order for a proposal to be considered, a Proponent must clearly demonstrate that they meet the mandatory requirements set out in Section 7.1 (Mandatory Criteria) of the RFP.

This section includes “Response Guidelines” which are intended to assist Proponents in the development of their proposals in respect of the weighted criteria set out in Section 7.2 of the RFP. The Response Guidelines are not intended to be comprehensive. Proponents should use their own judgement in determining what information to provide to demonstrate that the Proponent meets or exceeds the Regional District’s expectations.
